

If your local library does not lend e-books, and you'd rather not pay for content for your e-reader, there are many sources of free e-books on the web that are compatible with a wide range of e-reader devices. Check out the following sources and sites for great free e-books!

## Project Gutenberg

<http://www.gutenberg.org>

Created by Michael Hart in 1971, Project Gutenberg is the first and largest single collection of free e-books. Initially, all books were typed into a computer by hand; today, they are scanned by large teams of volunteers, and the scans are then turned into text files and proofread for accuracy. Project Gutenberg e-books are all public domain titles, including classics such as *Pride and Prejudice*, *David Copperfield*, *On the Origin of Species*, and much more. E-books are available in several formats, including PDF, Kindle, and EPUB.\*\*

## ManyBooks

<http://www.manybooks.net>

ManyBooks offers nearly 30,000 free e-books, primarily public domain titles scanned by Project Gutenberg. The ManyBooks website provides an enhanced searching and browsing interface, including cover images, and additional file format options. When you decide on a free title to download, you can select from among 23 formats, including Kindle, EPUB, HTML, PDF, and Sony Reader.

## Baen Free Library

<http://www.baen.com/library/intro.asp>

Baen Books is a prominent publisher of science fiction and fantasy titles. They offer the Baen Free Library, which provides free Baen-published titles by some well-known sci-fi and fantasy authors in electronic format. The authors choose if and which titles they want to be made available for free via the Baen Free Library. The available content changes frequently, and titles are available for a limited time only. E-books are available in EPUB, MOBI (Kindle), RTF, Microsoft Reader, and HTML.

**\*\*Use the EPUB format for NOOK, Sony Reader, iPad and most other e-reader devices; for Kindle devices, use either Kindle or MOBI formats.**

## Digital Book Index

<http://www.digitalbookindex.org/about.htm>

The Digital Book Index is a meta-index of a number of major e-book sites. The Index links to 165,000 full-text digital books, 140,000 of which are free. Sites indexed include Project Gutenberg, Internet Archive, Library of Congress, the British Library, Harvard University Library, California Digital Library, New York Public Library, and many others. Index entries link directly to the host site, so e-book formats will vary.

## Open Library

<http://openlibrary.org>

Open Library is a project of the Internet Archive ([www.archive.org](http://www.archive.org)), the goal of which is to have one webpage for every book ever published. Book information is collected from other websites, such as the Library of Congress and Amazon.com, as well as information supplied by users and volunteers. Records link the user to a freely-available electronic version if there is one, and if not, links to either borrow the e-book from the Open Library, purchase the book from a commercial website, or to borrow the book via a library catalog assist the user in accessing a copy of the book. There are currently about 20 million records in the Open Library's database.

## Librivox

<http://www.librivox.org>

Librivox offers over 5000 public domain audiobooks, which have been narrated for Librivox by volunteer narrators. The goal of their project is to record audio versions of all books in the public domain. Audiobooks are available in either MP3 or Ogg format.
